

TrafficQuota is a bandwidth and quota management solution for [Microsoft ISA Server 2004/2006](#) or [Microsoft TMG 2010](#). With TrafficQuota you can restrict user's access to the Internet depending on a volume of downloaded or uploaded data, define a maximum bandwidth (speed) consumed by user, view traffic usage statistics using various reports.

For example, user 'John' is allowed to download 500 MB a month, and after this he is denied access to the Internet. User 'Jane' is assigned a quote of 10 MB per day; if she goes over the 10 MB limit, she is denied further access to the Internet on that day.

Key Features

-
Compatible with Microsoft ISA Server 2004/2006 and Microsoft TMG 2010 Standard/Enterprise.

-
Supports ISA Server or TMG arrays.

-
Supports Active Directory.

-
Supports Proxy, Firewall and SecureNAT clients.

-
Reliable and fast in the networks with thousands and tens of thousands of users.

-
Consumes low CPU and memory resources.

-

Effective usage of multiple processors.

-

Controls all possible protocols (not http/ftp only).

-

Closely integrated with ISA Management console.

-

Remote management.

-

Bandwidth shaping (possibility to set speed limits for users and computers).

-

Quotas and bandwidth rules can be set for users, groups, computers and computer sets.

-

Possibility to set daily, weekly and monthly quotas simultaneously.

-

Powerful report system with full-featured visual designer, export to HTML/RTF/PDF formats, etc.

-

Real-time web statistics.

-

Terminates user's connections immediately when traffic exceeds a quota.

-

The user is notified when his/her traffic exceeds a quota.

-

Supports NTLM, Kerberos and Basic authentication for a web statistics pages.

-

Reports and web statistics can be displayed on different languages (English and Russian translations included).

-

Contains a lot of predefined reports.
